BEAUTY IN PERFECTION

PREMIUM SYNERGY

SERUM AND CREAM – BEAUTY IN PERFECTION

PREMIUM is the combination of next-generation active ingredient precision, excellence and beauty passion for your ultimate beauty experience.

Pamper your skin with a PREMIUM skincare concept that is well thought out down to the smallest detail.

This trend-setting synergetic anti-aging care was developed based on scientifically proven and award-winning cell membrane technology, and enables comprehensive energetic skin rejuvenation.

PREMIUM

The age of cells
can be influenced

This approach from current anti-aging research is related to the the distinction between biological and chronological aging.

As a consequence, age is not a constant factor but stands for the relationship between the condition of the cells and the condition of the organism as a whole.

Did you know that aging alters our cellular energy level and causes energetic skin aging? Tired cells lacking energy are no longer as agile as they were in youth. This level of energy and vitality of the epidermal cells can now be influenced.

PREMIUM

Anti-energetic-aging: Cell membrane technology

Thanks to this innovative technology, aged cells can be recharged from the inside and thus energetic cell aging counteracted. The active substance olive lysate that was granted the „Gold Innovation Zone Best Ingredient Award“ can stimulate the mitochondria in the skin cells and in this way reactivate the skin’s energy supply.

It has thus been proven to have an amazing anti-wrinkle, firming and repairing effect. Perfected by means of further future-oriented active ingredient technologies, PREMIUM SERUM and PREMIUM CREAM activate rejuvenation processes in the skin layers, giving the skin an exceptionally long-lasting youthfulness.

PREMIUM SERUM

Perfected by means of further future-oriented active ingredient technologies, PREMIUM SERUM and PREMIUM CREAM activate rejuvenation processes in the skin layers, giving the skin an exceptionally long-lasting youthfulness.

All-embracing perfecting luxury serum based on cell membrane technology for the reactivation of energetic cell renewal. This instantly firming moisturizing serum containing 3-fold hyaluron, red algae extract and antioxidant vitamin C stimulates collagen formation, counteracts light-related skin damage and contributes to an evenly radiant skin tone.

Effect:

- revitalizes the skin's moisture depots
- oil-soluble vitamin C promotes collagen production and the skin's radiance
- the fine nurturing molecules of the serum serve as a penetration accelerator for PREMIUM CREAM
- with a glow effect

PREMIUM SERUM
&
PREMIUM CREAM

PREMIUM CREAM

Innovative luxury cream based on cell membrane technology for the overall improvement of visible signs of skin aging. This future-oriented active principle using multi-peptide technology and plant-based collagen boosters activates the body's own all-embracing repair and vitalization processes, and counteracts energetic cell aging. For skin that is radiantly rejuvenated and visibly transformed.

Effect:

- smooths and fills all types of wrinkles
- reactivates the supporting tissue of the skin
- for a youthfully defined facial contour
- cell repair and antioxidant skin protection
- evenly pigmented skin with a glow effect

PREMIUM SERUM

EFFECTIVE

PREMIUM
CREAM

THE SYNERGY OF PREMIUM SERUM AND PREMIUM CREAM

Due to its moisture-laden consistency and its particularly small nurturing molecules, highly concentrated PREMIUM SERUM can be absorbed quickly and effectively by the skin. As a result of this deep moisturization of the skin, the active ingredients of PREMIUM CREAM can intensify their extensive anti-aging tasks and fulfil them in a targeted way.

The synergetic
skincare concept
for perfecting your
skincare routine.

The active ingredient concept

Olive lysate –

for the effective revitalization of mature skin

This vitalizing active substance is won from the plant stem cells of wild olive tree sprouts and activates the mitochondria (power plants) in the skin cells. Energetic skin aging is counteracted and tired skin cells can regain their youthful energy potential.

Skin elasticity, skin firmness and skin thickness are significantly improved, whereas saccharification of the collagen fibres is avoided. For a revitalized, regenerated and firmed up complexion.

Olive lysate based on cell membrane technology recharges cell energy:

- Revitalization of cell-internal energy storage
- Activation of cell renewal
- Revitalization of aged skin

The end result is a revitalisation of the skin with an amazing anti-wrinkle, firming and repairing effect.

Cell protecting vitamin complex

This antioxidant, cell-protecting vitamin complex contains the skin vitamins B3, B5, B6, C and E. By interacting they contribute to a firm skin saturated with moisture. Collagen production and cell regeneration are activated. The skin looks refined and soothed.

3-fold active hyaluronic acid

Short-chain, long-chain and cross-linked hyaluronic acid

Revitalizes the water depots inside the individual cells. This provides for an improvement in the skin's elasticity and tonicity. Wrinkles are immediately and visibly smoothed away. At the same time, the salts of hyaluronic acid strengthen the skin barrier and protect against moisture loss.

Long-chain hyaluronic acid

forms a film with the skin's keratin while evaporating, thereby protecting the skin from drying out. Fine lines and wrinkles are plumped up.

Short-chain hyaluronic acid

Can penetrate the upper layers of the Stratum corneum and bind moisture there. The skin is lastingly provided with moisture and its micro-texture smoothed.

Cross-linked hyaluronic acid

Biotechnologically produced hyaluronic acid is cross-linked in a special procedure. This structure has a moisture-replenishing effect, especially in skin wrinkles.

Pullulan

Is a natural active substance with a firming effect. Already a few minutes after application to the skin, a lifting effect is visible: the skin is smoother, wrinkles are reduced.

Plant-based collagen booster

This booster is won from the leaf sap of the South African medicinal plant *Bulbine frutescens*. It activates the production of skin-firming collagen and counteracts inflammatory processes. The thickness and firmness of the skin is demonstrably increased. Wrinkles are smoothed within a short time and the skin looks youthfully firmed up.

Peptide-rich avocado extract –

Plant-based anti-aging, detox and plumping up of the skin

This 3-fold active substance activates hyaluron synthesis and the skin's own detox processes. The skin looks plump, smooth, saturated with moisture and plumped up from within. Wrinkles caused by dryness are minimized and the pores refined. The complexion looks fresher, more even and more radiant.

Botox-like peptide combination

for a visible relaxation of the facial muscles

The peptide active substance pentapeptide-18 suppresses muscle contractions and thus prevents the formation of lines and wrinkles in the forehead and eye area. In combination with the Botox-like active substance hexapeptide-8, this effect is enhanced and mimic lines are softened already after 28 days. The two peptides act like a wrinkle-reducing softener.

Copper tripeptide-1

Copper peptides occur naturally in the human body and possess unique repair mechanisms. The active substance can be transported into the skin in a targeted manner by the coupled tripeptide. Wrinkles, light-induced skin damage and uneven pigmentation can be counteracted. The skin is given improved elasticity and firmness, and a clear, uniform skin texture.

Matrix repair – peptide active substance

Supports the activation of the skin's own repair processes, especially in the area of the sensitive papillae layer that is susceptible to UV damage, and stimulates collagen growth and cell renewal. The dermal-epidermal junction is strengthened and wrinkles can be smoothed three-dimensionally.

Vitamin C

The vitamin C derivative ascorbyl tetraisopalmitate can reduce UV-induced cell damage and acts as a natural radical catcher. It increases skin firmness by stimulating collagen synthesis. In addition, it counteracts melanin production and in this way prevents hyperpigmentation. For a smoother, firmer and more evenly pigmented skin with a youthful glow.

Saccharide Isomerate

The skin-identical carbohydrate complex Pentavitin® is able to provide the skin with long-lasting moisture (up to 72h). This long-term effect is based on its permanent bonding to the skin's own keratin. The skin's barrier function is strengthened and the skin is less prone to irritations.

Softener glow combination

Subtle glow pigments, in combination with the vitamin C contained, instantly give pale, tired skin a youthful radiance.

Shea butter

(Butyrospermum Parkii (Shea) Butter)

Is rich in cell-protecting tocopherols, as well as antioxidant components. It can strengthen the lipid barrier of the horny layer, regulate the skin's moisture balance and has a soothing and smoothing effect.

Avocado oil

(Persea Gratissima (avocado) Oil)

This valuable oil is rich in cell-protecting tocopherols and promotes cell regeneration. Thanks to its texture it can penetrate deep into the layers of the skin, improve moisture retention and thus optimise the effect of the other active ingredients. Due to its high content of palmitoleic acid it is particularly skin-friendly, especially suitable for sensitive skin and skin with an impaired barrier.

Vitamin E acetate

(tocopheryl acetate)

Is converted to free vitamin E in the skin and has antioxidant properties. It protects the cells against free radicals and as a moisturizer improves the elasticity and softness of the skin.

Allantoin

Is found in large amounts not only in the comfrey root, in horse chestnut bark, in wheat germ and beetroot, but also in the human body. Allantoin has a skin-smoothing effect, especially beneficial to rough skin. It stimulates new cell formation and regenerates the tissue.

Bisabolol

This main active substance in camomile oil with its skin-soothing and anti-inflammatory properties calms skin irritations and redness, and regenerates the tissue.

PREMIUM

Panthenol

(provitamin B5)

Has moisture-retaining, anti-inflammatory and regenerative properties, and strengthens the barrier function of the skin.

Red alga

(Chondrus crispus)

This extract mostly comes from North Atlantic coasts. It has a high content of vitamin B1, B2, C and niacin, and has skin-smoothing and moisture-retaining properties.

Almond oil

One third of this strong antioxidant and skin-protecting oil consists of linoleic acid and in this way contributes to the protection of the natural skin barrier. It has anti-inflammatory and moisturizing properties, and brings back balance even to sensitive skin.
